Signage

Signage is the idea that signs must be placed with certain specification standards to inform users of common and/or important themes in MC:BSR-S2.

Signage Requirements

It is considered a Crime of the Property Owner to not follow all **Signage Requirements**.

1. All **Signage** must be in a Valid Signage Location according to its information type status.
2. **Signage** must follow the exact Signage Formatting detailed below.

Valid Signage Locations

Signage must be placed in a location or duplicates in multiple locations in order to satisfy the conditions for each type of Property.

Property Information Signage vs General Information Signage

Property Information Signage is **Signage** that must be posted according to the guidelines below. **General Information Signage** is **Signage** that is posted inside of Property to inform users about portions of the property, certain objects or rules. This type of **Signage** should be placed as if it were a private property where the portion of property or focal object is the Private Property.

Public Property Valid Signage Locations

Public Property doesn't require **Signage** unless it's a portion of a Private Property or Shared Private Property in which case the details of **Signage** are detailed below in Private and Shared Private Property Valid Signage Locations

Private and Shared Private Property Valid Signage Locations

Signage must be placed where Citizens who are not currently inside of the Property can view the signs and read them.

- If the Property has at least 1 obvious entrance with distinct portions which are not entrances:

- Every entrance to the <u>Property</u> must have all relevant **Signage**.
- If the <u>Property</u> has no entrances:
  - One set of relevant **Signage** must be constructed on the structure exterior in an obvious location.
- If the <u>Property</u> is all entrances (has no distinct entrances):

  \- A <u>Property</u> line must be constructed in the ground, in the air or in the water which details where the edge of the property of is. This line can be constructed on the <u>Property</u> border <u>rather than 1 block in</u>. All relevant **Signage** must be placed on the property line for each cardinal direction. If **Signage** appears more than 24 blocks away from each other on the property line, a new set of relevant **Signage** must be placed to make the distance shorter than 24 blocks.

  If a portion of the <u>Property</u> is public and a portion is private then the same rules as stated above must be true for both the private and public portions. Where the transition from public to private must have **Signage** but the transition from private to public does not require **Signage**.

(Shared) Private Property Construction Valid Signage Locations

If a <u>Private Property</u> or <u>Shared Private Property</u> is under construction on it's borders which would cause the <u>Property</u> line to become difficult to determine, then place **Signage** of form <u>(Shared) Private Property Under Construction Signage</u> according to the locational specifications in <u>Private and Shared Private Property Valid Signage Locations</u>

Unowned and Owned Property Valid Signage Locations

<u>Unowned Property</u> must have all relevant **Signage** in it's center-point or focal location.

Signage Formatting

Subsurface Land Provision Signage

Dye Color: Blue
Glowing: Yes
Information Type: Property
Text:

- NOTICE
- subsurface
- land provision

- Y<provision level>

Hazardous Materials Signage

Dye Color: Blue
Glowing: Yes
Information Type: General
Text:

- WARNING
- caution when
- near hazardous
- material

(Shared) Private Property Killing Signage

Dye Color: Blue
Glowing: Yes
Information Type: Property
Text:

- NOTICE
- killing status
- <allowed\NOT allowed>

(Shared) Private Property Damaging Signage

Dye Color: Blue
Glowing: Yes
Information Type: Property
Text:

- NOTICE
- damage status
- <allowed/NOT allowed>

Public Property Signage

Dye Color: Yellow
Glowing: Yes
Information Type: Property
Text:

- GOOD TO GO
- public property
- enter at will

Shared Private Property Signage

Dye Color: Orange
Glowing: Yes
Information Type: Property
Text

- WARNING
- private property
- only enter if
- permissed

Private Property Signage

Dye color: Red
Glowing: Yes
Information Type: Property
Text:

- WARNING
- private property
- no entry

Publicized Private Property Signage

Dye Color: Red
Glowing: Yes
Information Type: Property
Text:

- GOOD TO GO
- private property
- enter at will

(Shared) Private Property Under Construction Signage

Dye Color: Orange
Glowing: Yes

Information Type: Property
Text:

- WARNING
- private property
- under
- construction

Unowned Property Signage

Dye Color: Yellow
Glowing: Yes
Information Type: Property
Text:

- GOOD TO GO
- unowned property
- please see
- usage rules
Owned Property Signage

Dye Color: Yellow
Glowing: Yes
Information Type: Property
Text:

- NOTICE
- owned property
- understand
- owner intent

Defining Extra Information Alongside Regular Signage

A [Property Owner](#) may define extra information about their [Property](#). Extra information must be placed in [Valid Signage Locations](#). Extra information must be the same color as the property rule that it regards for it to be legally valid.

> ≔ **Example**

Defining that, "users who trespass will be issued with a 10 Diamond <u>Fine</u>" must be placed next to the regulated <u>Private Property Signage</u> and be in red, glowing ink.

Extra information which pertains to a legal rule, such as shown in the example above, must be negotiated with a <u>Elected Official</u> before being officialized. The sign should not glow until it is officialized. It is considered a <u>Crime</u> to glow a sign before it has been officialized. Glow ink will not be provided. Writing a rule in the form detailed in the example allows the book-work to be skipped when the rule is broken because the rule negotiation has already been completed.

Sign Color Meanings

Signage has particular colors to signal certain ideas. <u>Property Owner</u> should attempt to avoid using colors for signs which are already bound when possible to avoid confusion. If a sign is confused to be part of a rule due to it's color and formatting when it is, in fact, not legal then the <u>Property Owner</u> may be punished with <u>Criminal Punishment</u>.

Unbound in this case means that there is no current meaning for the color
Red: no trespassing
Orange: no trespassing, some <u>Citizens</u> allowed
Yellow: entry allowed
Green: unbound
Lime: non-legally enforceable rule
Cyan: unbound
Light Blue: unbound
Blue: additional information
Purple: unbound
Magenta: unbound
Pink: unbound
White: unbound, typically used for locational names
Light Gray: unbound
Gray: unbound
Black: unbound, typically used for locational names
Brown: unbound

Generally speaking, regarding information type:
Red: property
Orange: property

Yellow: property
lime: general
blue: general
white: general
black: general
